STATEMENT

amalian LASHES

Herewith, I state that I am running a clinical study with amalian lashes revitalization gel to evaluate the safety and efficacy of the cosmetic formulation. The study is still on going. On the basis of the today's closed cases, I can state that the formulation is extremely efficient and biocompatible. In general eye lashes enhancement (length) and revitalization (fullness and darkness) are clearly visible after 6-8 weeks. The formulation is very well tolerated no side effects (itching, redness, skin or iris pigmentation). This must be emphasized in comparison to other products that we had before (M2-Lashes, RevitaLash), which caused often redness of the eyes. I recommend the use of amalian lashes without restriction to every patient, who is looking for a valuable and efficient solution for eyelashes enhancement.
